

a frame having a front surface, a back surface, a lengthwise opening, a first projected tab mounted in a fixed hole at an end of the frame on the same axis as the lengthwise opening, a second projected tab moveable in an axial direction along the lengthwise opening, threadable locking means for fixing the second projected tab in selected locations along the lengthwise opening spaced longitudinally from the first projected tab at a distance corresponding to the distance between the pre-cut mounting holes, the first and second projected tabs each having a conical point that outwardly projects from the back surface of the frame, at least one bubble gauge mounted to the frame, and means associated with the first projected tab and the second projected tab for accurately indenting said marks in the wall.

2. (Previously Amended) The tool as recited in Claim 1, wherein the conical point of the first projected tab and the conical point of the second projected tab outwardly project an equal distance from the back surface of the frame and wherein the frame includes a printed reference scale with the fixed hole serving as a zero point on the printed reference scale.
